8th February 2024

### Preliminary Precipitation and Temperature Summary December, 2023

#### **Highlights**

Nepal mostly experienced dry conditions with light scattered rain at some hilly places with light snow fall over the higher altitude areas. Cold and dry weather dominated the latter half of December. Daytime temperatures were higher than normal, while nighttime temperatures were cooler in the northern regions and warmer in the southern regions of the country.

#### **Synoptic Sequences**

A number of feeble Western Disturbance affected weather of Nepal during December.

#### **Precipitation**

Below normal precipitation was recorded over most part of the country (Figure 2). Isolated part of Karnali Province, Gandaki Province and Koshi Province recorded precipitation above 10 mm while rest of the country recorded precipitation below 10 mm. Western part of Madhesh Province, central and southern part of Bagamati Province, eastern part of Lumbini Province and southern part of Gandaki Province didn't record any precipitation during December (Figure 1).

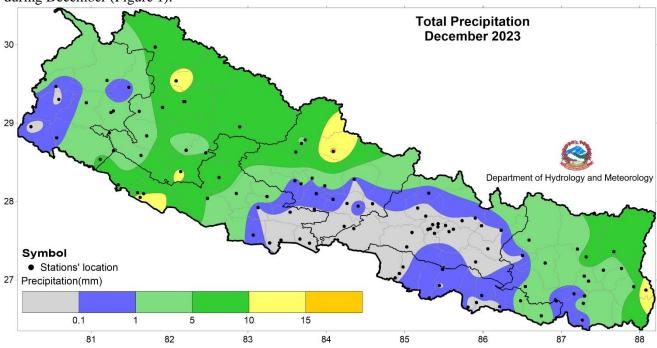

Figure 1: Total precipitation in December 2023.

Humde station of Manang district recorded the highest 24-hours precipitation of 16.1 mm on 12<sup>th</sup> December 2023 which was also the highest monthly total precipitation among the 108 stations. 12 stations recorded trace amount of precipitation while 32 stations didn't record any precipitation during December. The highest (175.9%) percentage of monthly normal precipitation were recorded at Kanyam Tea Estate station of Ilam district (Annex 1). Based on the average of 92 stations (stations with monthly normal precipitation data) shown in figure 2, Nepal received 24.8% of the normal precipitation of the month. In general, less than 90% of normal precipitation is considered as below normal, 90 to 110% is considered as near normal, and more than 110% of normal precipitation is considered as above normal precipitation for the month. Humde station of Manang district broke the previous record of highest daily precipitation for the month of December (Table 2).

### Government of Nepal Ministry of Energy, Water Resource and Irrigation Department of Hydrology and Meteorology

#### **Climate Division (Climate Analysis Section)**

Babarmahal, Kathmandu

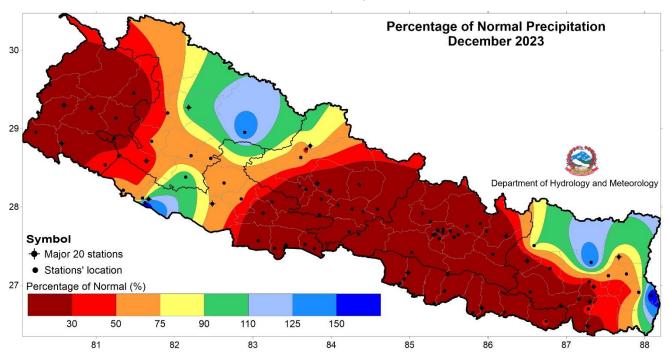

Figure 2: Percentage of normal precipitation in December 2023.

Figures 3 and 4, respectively, show the temporal distribution of monthly and winter seasonal cumulative average of daily precipitation at 20 major stations located as shown in figure 2. The timeseries of precipitation shows that precipitation was below normal during the month of December.

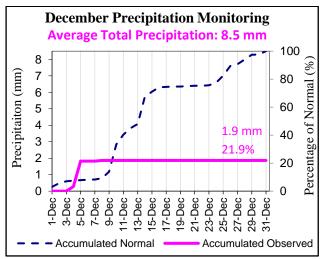

Figure 3: Cumulative average of daily normal and observed precipitation during December 2023.

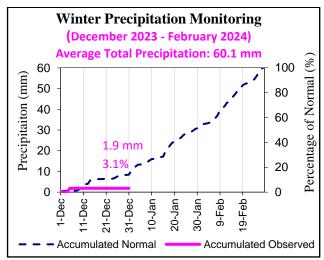

Figure 4: Cumulate average of daily normal and observed precipitation during winter season.

#### **Maximum Temperature**

Most parts of the country recorded above normal maximum temperature while isolated part across the country recorded near-normal to below normal maximum temperature during December (Figure 6). The Eastern Terai experienced warmer maximum temperatures than western parts. Additionally, certain isolated areas within the Madhesh Province and Koshi Province recorded monthly maximum temperatures higher than 27°C (Figure 5).

### Government of Nepal

#### Ministry of Energy, Water Resource and Irrigation Department of Hydrology and Meteorology Climate Division (Climate Analysis Section)

Babarmahal, Kathmandu

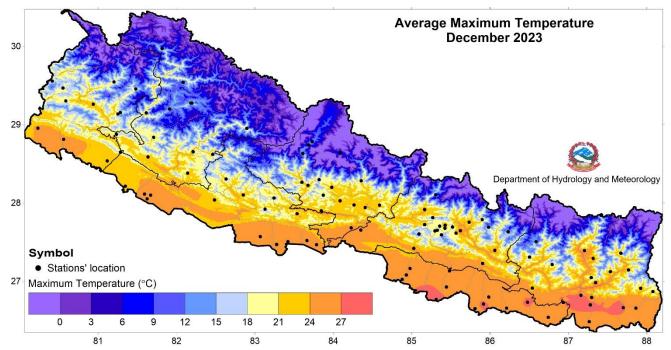

Figure 5: Maximum Temperature in December 2023.

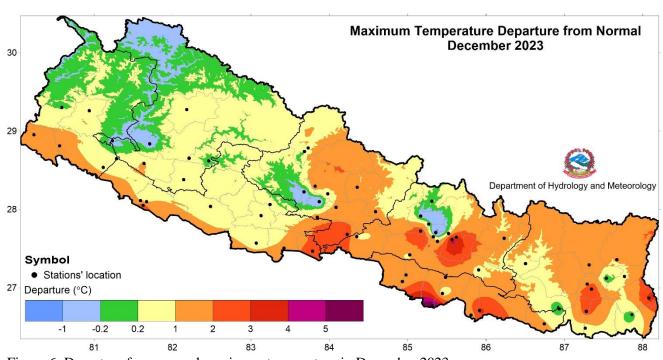

Figure 6: Departure from normal maximum temperature in December 2023.

Gaur station of Rautahat district and Humde station of Manang district recorded the highest and lowest monthly maximum temperature of 29.8°C and 8.2°C respectively. Similarly, the highest monthly anomaly of 4.1°C was also recorded at Gaur station of Rautahat district and the lowest of -1.3°C was recorded at Kathmandu Airport station of Kathmandu district (Annex 1). The highest daily maximum temperature of 32.2°C was recorded at Janakpur Airport station of Dhanusha district on 24<sup>th</sup> December while the lowest daily maximum temperature of 2.5°C was recorded at Humde of Manang district on 12<sup>th</sup> December. Some of the stations broke the December's highest record of maximum temperature in this December (Table 2).

Babarmahal, Kathmandu

#### **Minimum Temperature**

During December, there was a noticeable difference in the deviation from the normal monthly minimum temperature between the northern and southern regions of the country. The northern parts experienced cooler temperatures than normal, while the southern parts were warmer than normal (Figure 8).

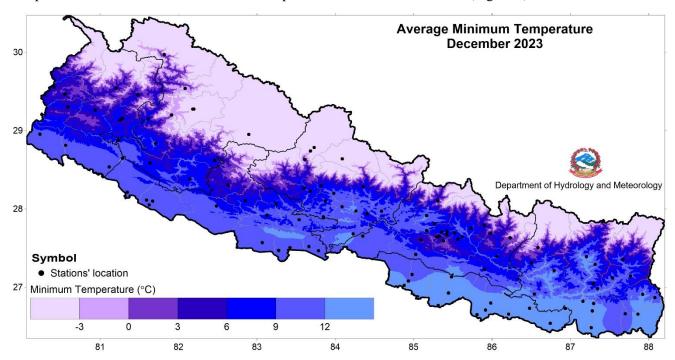

Figure 7: Minimum Temperature in December 2023.

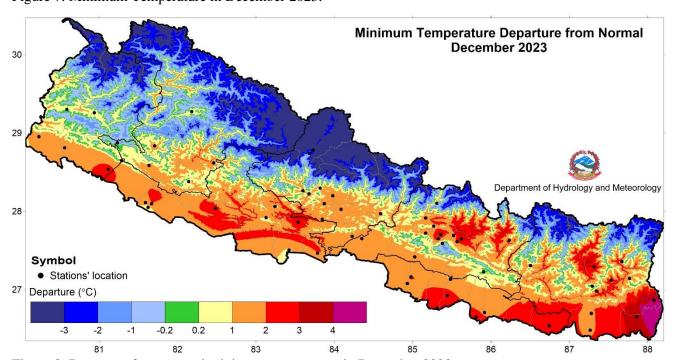

Figure 8: Departure from normal minimum temperature in December 2023.

Babarmahal, Kathmandu

Dharan Bazar station of Sunsari district and Humde station of Manang district recorded the highest and lowest monthly minimum temperature of 14.7°C and -6.5°C respectively. Similarly, the highest monthly anomaly of 4.1°C was recorded at Kanyam Tea Estate station of Ilam district and the lowest anomaly of -3.2°C was recorded at Jomsom station of Mustang district (Annex 1). The highest daily minimum temperature of 19.0°C was recorded at Jaleshwor station of Mahottari district on 7<sup>th</sup> December while the lowest daily minimum temperature of -15.0°C was recorded at Humde station of Manang district on 20<sup>th</sup> December.

#### **Drought**

Sudurpaschim Province, eastern half of Gandaki Province and Lumbini Province, Bagamati Province, Madhesh Province and south-western part of Koshi Province faced extreme drought condition (below normal precipitation by 70%) in December. Similarly, southern and western parts of Karnali Province, central parts of Lumbini Province and some central parts of Koshi Province was affected by moderate to severe drought condition. However, wet condition has been observed over isolated parts of Karnali Province, Lumbini Province and Koshi Province (Figure 2). Drought has been categorized based on the observed precipitation compared to normal. A drought is defined as moderate, severe and extreme as given in the table below.

Table 1: Categorization of drought.

S.N.	Percentage of normal precipitation (%)	Drought category
1	50 - 75	Moderate drought
2	30 - 50	Severe drought
3	< 30	Extreme drought

#### Historical record break

In this December, several stations broke the previous record of December's extremes of temperature and precipitation (Table 2 and 3).

Table 2: List of stations breaking the December's highest daily maximum temperature in December 2023.

S.N.	Station Name	District	Record break maximum temperature (°C)/Date	Previous highest maximum temperature (°C)/Date
1	Gulariya	Bardiya	29.0/2023-12-03	28.5/2019-12-05

#### *Note:*

- "mm" = millimeter; "temp" = temperature; "-" = Data Not Available, "NR" = No rainfall.
- This summary is prepared based on the precipitation and temperature received at 111 meteorological stations during December, 2023. Out of 111 stations, 92 stations have normal precipitation data, 67 stations have normal maximum and 66 stations have normal minimum temperature data. Normal precipitation/temperature is the average of the monthly precipitation/temperature for period of 1991-2020.
