5th March 2024

Preliminary Precipitation and Temperature Summary
January, 2024

Highlights

Nepal experienced dry weather conditions with isolated light snow and rain over some places and dense fog conditions persisted over isolated places. Daytime temperatures were cooler than normal over Terai region and warmer at hilly and mountainous regions. Nighttime temperatures were cooler in the western hilly regions and warmer at southern and eastern parts of the country.

Synoptic Sequences

A number of weak western disturbances and an active western disturbance towards the end of January affected weather of Nepal.

Precipitation

Country recorded below normal precipitation in January (Figure 2). Isolated part of Gandaki Province and Bagamati Province recorded precipitation above 10 mm while rest of the country recorded precipitation below 10 mm. Southern part of Koshi Province, western part of Madhesh Province, central and southern part of Bagamati Province, southern part of Gandaki Province and most parts of Lumbini Province, Karnali Province and Sudurpaschim Province didn't record any precipitation during January (Figure 1).

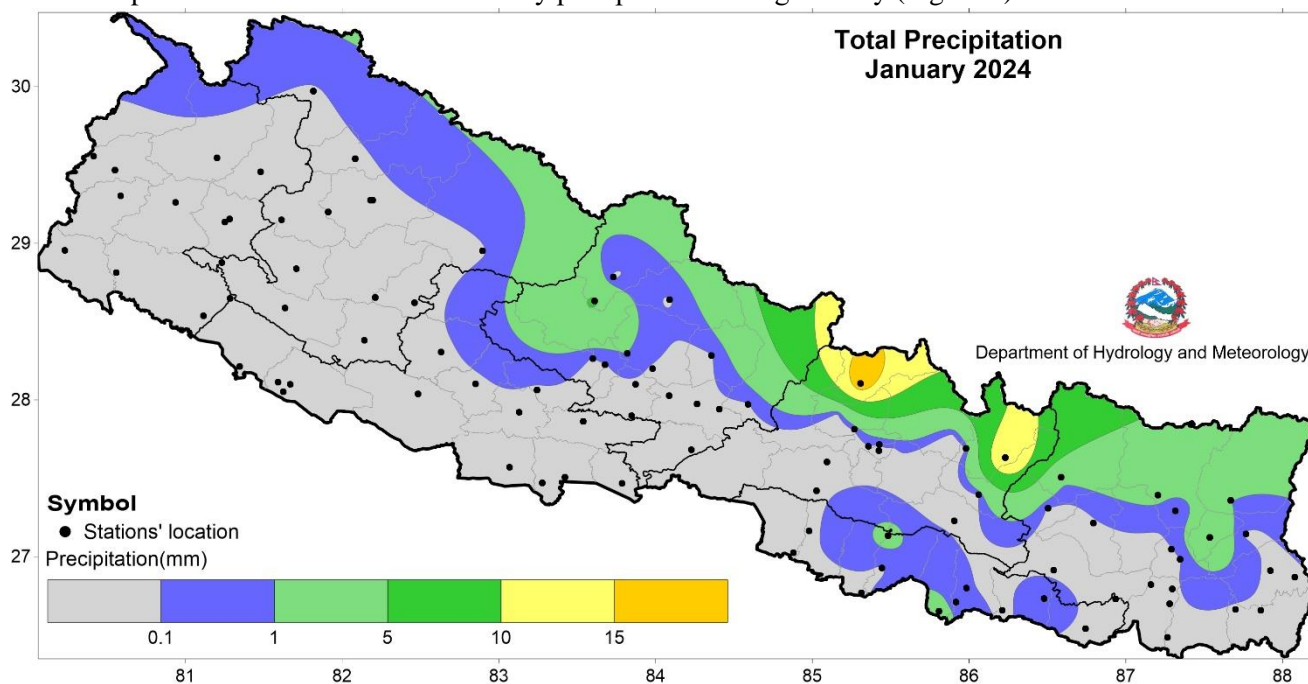

Figure 1: Total precipitation in January 2024.

Dhunche station of Dhading district recorded the highest monthly precipitation of 17.7 mm in January 2024. The highest (91.9%) percentage of monthly normal precipitation were recorded at Jiri station of Dolakha district which also recorded the highest 24-hours precipitation of 15.9 mm on 17th January (Annex 1). Out of 103 stations, 82 stations didn't record any precipitation, 7 stations recorded traces and 14 stations recorded precipitation ranging from 0.1 mm to 17.7 mm. Based on the average of 90 stations (stations with monthly normal precipitation data) shown in figure 2, Nepal received 2.6% of the normal precipitation of the month. In general, less than 90% of normal precipitation is considered as below normal, 90 to 110% is considered as near normal, and more than 110% of normal precipitation is considered as above normal precipitation for the month.

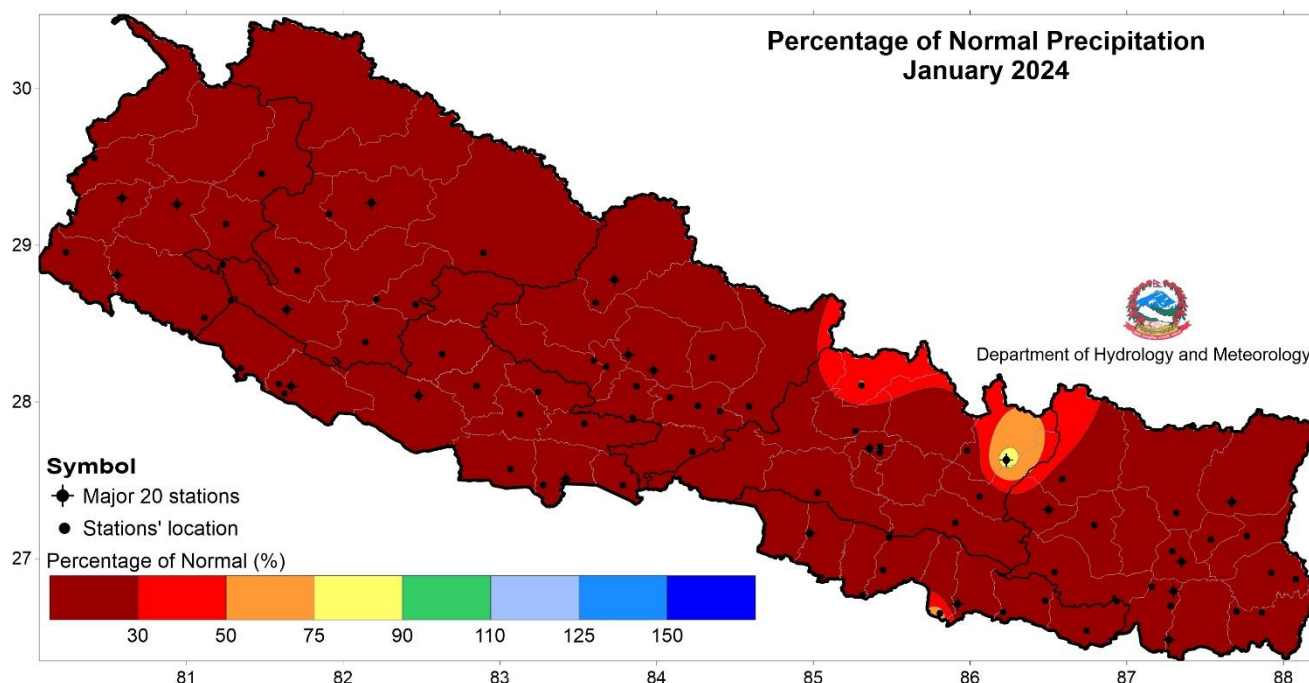

Figure 2: Percentage of normal precipitation in January 2024.

Figures 3 and 4, respectively, show the temporal distribution of monthly and winter seasonal cumulative average of daily precipitation at 20 major stations located as shown in figure 2. The timeseries of precipitation shows that precipitation was below normal during the month of January.

Figure 3: Cumulative average of daily normal and observed precipitation during January 2024.

Figure 4: Cumulate average of daily normal and observed precipitation during winter season.

Maximum Temperature

Central and Northern parts of the country recorded above normal maximum temperature while southern plains recorded near-normal to below normal maximum temperature during January (Figure 6). The Eastern Terai experienced warmer maximum temperatures than western parts (Figure 5).

Manthali station of Ramechhap district and Humde station of Manang district recorded the highest and lowest monthly maximum temperature of 24.6°C and 5.5°C respectively. Similarly, the highest monthly anomaly of 3.7°C was recorded at Dhulikhel station of Kavrepalanchok district and the lowest of -4.3°C was recorded at Tikapur station of Kailali district (Annex 1). The highest daily maximum temperature of 29.6°C was recorded at Gaur station of Rautahat district on 1st January while the lowest daily maximum temperature of 1.9°C was recorded at Humde of Manang district on 23rd January. Some of the stations broke the January's highest record of maximum temperature in this January (Table 2).

Minimum Temperature

During January, southern parts of the Sudurpaschim Province and Gandaki Province, most parts of Lumbini Province, Madhesh Province and Koshi province, and north-eastern parts of Bagamati Province recorded above normal minimum temperature while rest of the country recorded near-normal to below normal temperatures. (Figure 8). The Eastern Terai experienced warmer minimum temperatures than western parts (Figure 7). Some of the stations broke the January's highest record of maximum temperature in this January (Table 3).

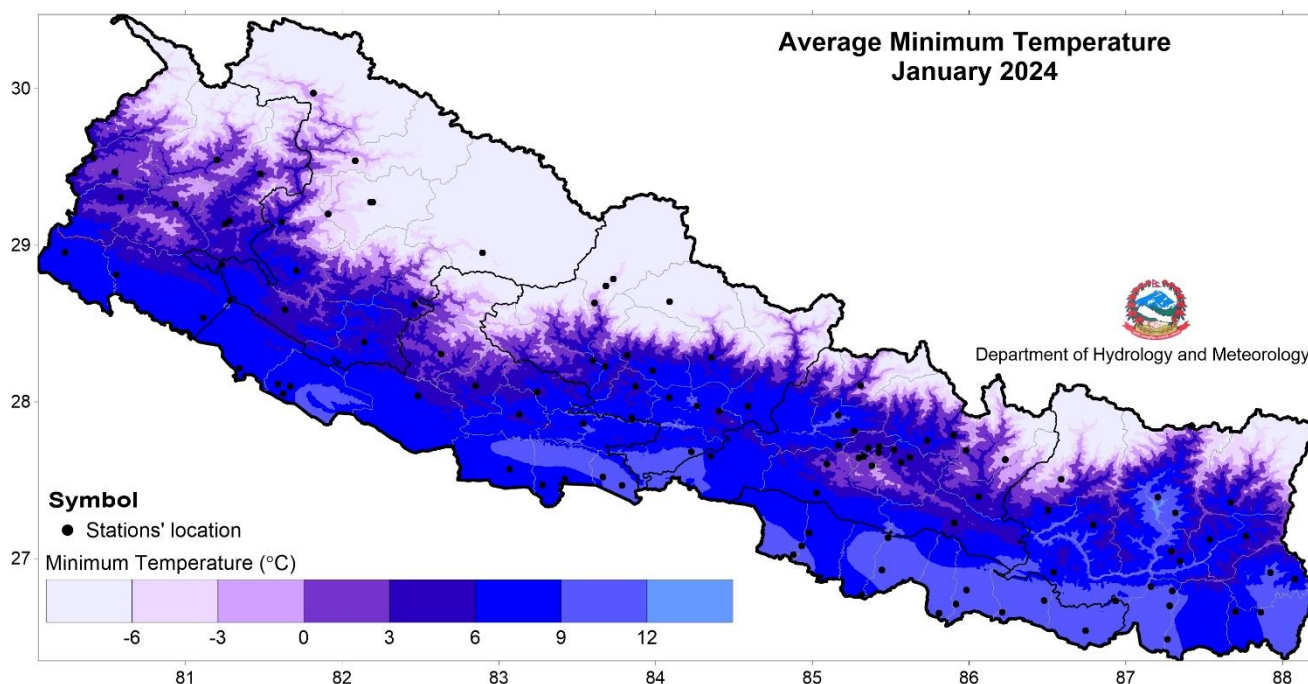

Figure 7: Minimum Temperature in January 2024.

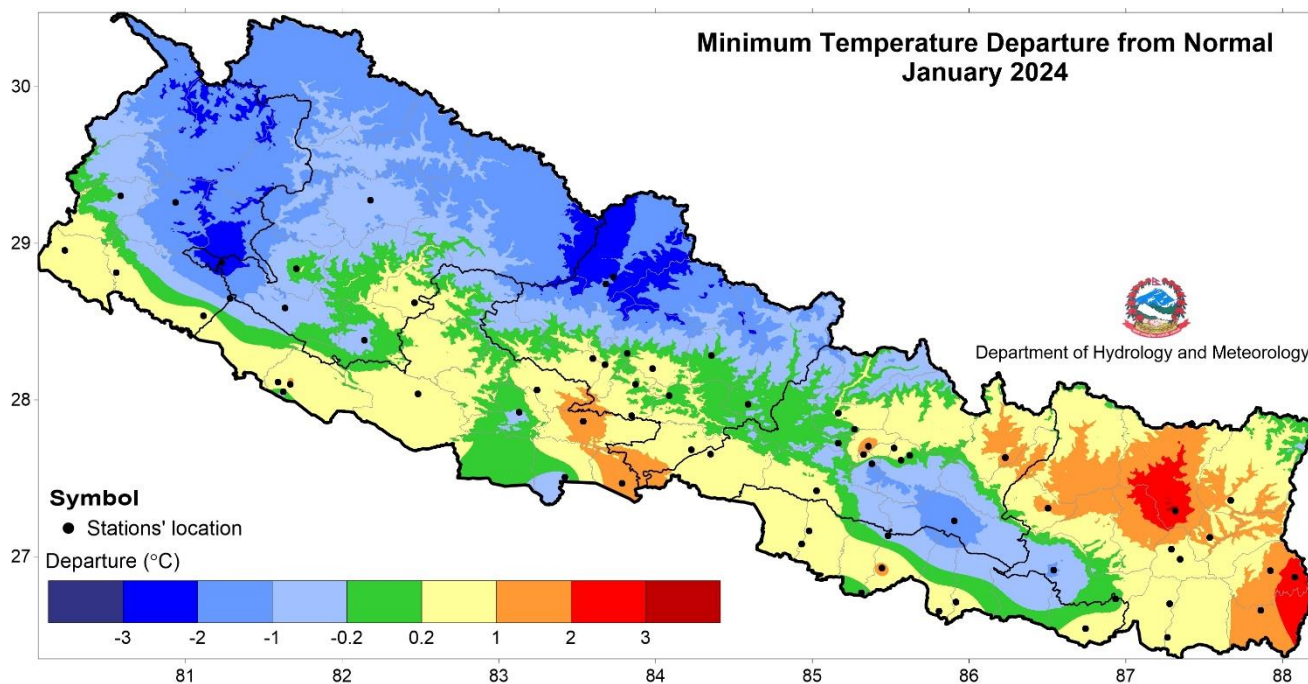

Figure 8: Departure from normal minimum temperature in January 2024.

Karmaiya station of Sarlahi district and Humde station of Manang district recorded the highest and lowest monthly minimum temperature of 10.5°C and -9.0°C respectively. Similarly, the highest monthly anomaly of 3.1°C was recorded at Chainpur station of Sankhuwasabha district and the lowest anomaly of -2.9°C was recorded at Pusma Camp station of Surkhet district (Annex 1). The highest daily minimum temperature of 14.9°C was recorded at Phattepur station of Saptari district on 2nd January while the lowest daily minimum temperature of -12.1°C was recorded at Humde station of Manang district on 25th January.

Drought

Country experienced Extreme drought condition (below normal precipitation by 70%) in January. Moderate to severe drought condition has been observed over isolated parts of Bagmati Province and Madhesh Province (Figure 2). Drought has been categorized based on the observed precipitation compared to normal. A drought is defined as moderate, severe and extreme as given in the table below.

Table 1: Categorization of drought.

S.N.	Percentage of normal precipitation (%)	Drought category
1	50 - 75	Moderate drought
2	30 - 50	Severe drought
3	< 30	Extreme drought

Historical record break

In this January, several stations broke the previous record of January's extremes of temperature and precipitation (Table 2 and 3).

Table 2: List of stations breaking the January's highest daily maximum temperature in January 2024.

S.N.	Station Name	District	Record break maximum temperature (°C)/Date	Previous highest maximum temperature (°C)/Date
1	Gaur	Rautahat	29.6/2024-01-01	29.1/2019-01-27
2	Khadbari	Sankhuwasava	26.0/2024-01-16	25.5/2023-01-31
3	Panchkhal	Kavrepalanchok	32.8/2024-01-11	28.4/2021-01-06

Table 3: List of stations breaking the January's highest daily minimum temperature in January 2024.

S.N.	Station Name	District	Record break minimum temperature (°C)/Date	Previous highest minimum temperature (°C)/Date
1	Charikot	Dolakha	-1.8/2024-01-25	-1.5/2017-01-24
2	Damak	Jhapa	1.5/2024-01-27	2.0/2020-01-13
3	Dunai	Dolpa	-6.0/2024-01-01	-4.6/2002-01-18

Note:

- “mm” = millimeter; “temp” = temperature; “-” = Data Not Available, “NR” = No rainfall.
- This summary is prepared based on the precipitation and temperature received at 111 meteorological stations during January, 2024. Out of 111 stations, 90 stations have normal precipitation data, 69 stations have normal maximum and 67 stations have normal minimum temperature data. Normal precipitation/temperature is the average of the monthly precipitation/temperature for period of 1991-2020.
