27<sup>th</sup> July 2025

Preliminary Precipitation and Temperature Summary  
June, 2025

### Highlights

Precipitation over the country as a whole was 91.7% of the normal indicating near-normal precipitation. Most parts of the country recorded above normal minimum temperature, while most of the central and eastern parts of the country recorded above normal maximum temperature.

### Synoptic Sequence

The monsoon entered eastern Nepal, covering most parts of Koshi Province, on May 29, 2025. By June 12, it had expanded to Madhesh Province, Bagmati Province, Gandaki Province, and eastern part of Lumbini province. By June 20, the monsoon system had spread across the entire country (Figure 1). From June 1<sup>st</sup> –9<sup>th</sup> Western Disturbance persisted as a cyclonic circulation and trough over north Pakistan, Punjab, and adjoining areas, influencing Nepal's weather. By June 13<sup>th</sup> –14<sup>th</sup>, the monsoon expanded to Koshi Province, Madhesh Province, Bagmati Province, Gandaki Province, and eastern Lumbini province, with partial influence from Western disturbances and local convection in the western part of the country. Low pressure areas over the Bay of Bengal and north Odisha also contributed to monsoon activity. From June 15<sup>th</sup> –19<sup>th</sup>, a well-marked low-pressure area over Gangetic West Bengal and Jharkhand, moving northwestward, enhanced monsoon activity. By June 19, influence of the low-pressure area over Gangetic West Bengal was noted in Nepal, alongside monsoonal winds affecting Koshi, Madhesh, Bagmati, Gandaki, and eastern Lumbini provinces. From June 20<sup>th</sup> –25<sup>th</sup>, driven by a well-marked low-pressure area over northeast Jharkhand and southwest Bihar, with associated upper air cyclonic circulations and troughs extending from Punjab to the Bay of Bengal and upper air cyclonic circulations over northeast Rajasthan, central Assam, and southeast Uttar Pradesh, along with troughs, sustained widespread monsoon activity. The monsoon trough, lying north of its normal position by June 30, affected continuous monsoon influence across the country.

### Precipitation

Most parts of the country recorded precipitation above 200 mm reaching over 800 mm in isolated parts of Koshi Province and Gandaki Province whereas northern part of Karnali Province and north-western part of Gandaki Province recorded precipitation less than 100 mm (Figure 2). Most parts of the country recorded near-normal precipitation (Figure 3). Some parts of Karnali Province, Lumbini Province, Madhesh Province and Koshi Province, and few parts of Sudurpaschim Province, Gandaki Province and Bagamati Province recorded below normal Precipitation while remaining parts of the country recorded near-normal to above normal precipitation (Figure 3).

Lumle station recorded the highest monthly precipitation of 1255.3 mm while Jomsom station recorded the lowest monthly precipitation of 39.3 mm. Charikot station recorded the highest percentage of normal of 195.6% while Rampur station recorded the lowest percentage of normal of 29.8% (Annex 1). Based on the average of 123 stations, Nepal received 91.7% of the normal precipitation. The highest daily precipitation of 212.2 mm was recorded at Attariya station on 30<sup>th</sup> June.

The temporal distribution of all Nepal cumulative precipitation shows that precipitation remained near normal to below normal for the whole period of the month (Figure 4). The Terai region and most stations in Karnali Province recorded fewer rainy days, mostly below 12 days, while many stations in Koshi Province, Bagamati Province and Gandaki Province recorded over 15 rainy days, with some stations recording above 24 rainy days (Figure 5). Recent three years along with 2025 have shown a negative precipitation anomaly in June. The country averaged total precipitation of June 2025 was lower than 2024 (Figure 6).

### Maximum Temperature

Maximum temperature of Terai remained above  $33^{\circ}\text{C}$ , reaching over  $36^{\circ}\text{C}$  in few parts of Lumbini Province and Madhesh Province (Figure 7). Most parts of Sudurpaschim Province, Lumbini Province some parts of Karnali Province, Gandaki Province, Bagamati Province and Koshi Province recording near normal to below normal maximum temperature while remaining parts of the country recorded above normal maximum temperature (Figure 8).

Birganj station and Lukla Airport station recorded the highest and lowest monthly average maximum temperature of  $37.4^{\circ}\text{C}$  and  $19.1^{\circ}\text{C}$  respectively. Similarly, the highest monthly anomaly of  $3.7^{\circ}\text{C}$  was recorded at Bahrabise station and the lowest of  $-3.2^{\circ}\text{C}$  was recorded at Dailekh station (Annex 1). The highest daily maximum temperature of  $42.6^{\circ}\text{C}$  was recorded at Birganj station on 14<sup>th</sup> June while the lowest daily maximum temperature of  $9.9^{\circ}\text{C}$  was recorded at Humde station on 3<sup>rd</sup> June. Recent three years along with 2025 have shown

Government of Nepal  
Ministry of Energy, Water Resource and Irrigation  
Department of Hydrology and Meteorology  
Climate Division (Climate Analysis Section)

a positive anomaly in June. The country averaged maximum temperature of June 2025 was lower since 2023 (Figure 9).

**Figure 9: All Nepal monthly average maximum temperature of June from 1981 to 2025 (average of 66 stations)**

#### Minimum Temperature

Minimum temperature across most parts of Terai remained above  $24^{\circ}\text{C}$ , reaching over  $27^{\circ}\text{C}$  in isolated parts of Lumbini Province and Madhesh Province (Figure 10). Most parts of the country recorded above normal minimum temperature, however, some parts of Sudurpaschim Province, Karnali Province, Lumbini Province, Gandaki Province, and Bagamati Province recorded below normal minimum temperature (Figure 11).

**Figure 10: Minimum Temperature in June 2025.**

Birganj station and Humde station recorded the highest and lowest monthly average minimum temperature of  $27.8^{\circ}\text{C}$  and  $8.6^{\circ}\text{C}$  respectively. Similarly, the highest monthly anomaly of  $5.0^{\circ}\text{C}$  was recorded at Baitadi Gothalapani station and the lowest anomaly of  $-5.6^{\circ}\text{C}$  was recorded at Dunai station (Annex 1). The highest daily minimum temperature of  $32.6^{\circ}\text{C}$  was recorded at Lumbini station on 12<sup>th</sup> June while the lowest daily minimum temperature of  $1.8^{\circ}\text{C}$  was recorded at Darchula station on 15<sup>th</sup> June. Recent five years along with 2025

Government of Nepal

have shown a positive anomaly in June. The country averaged minimum temperature of June 2025 was lower than in 2024 (Figure 12).

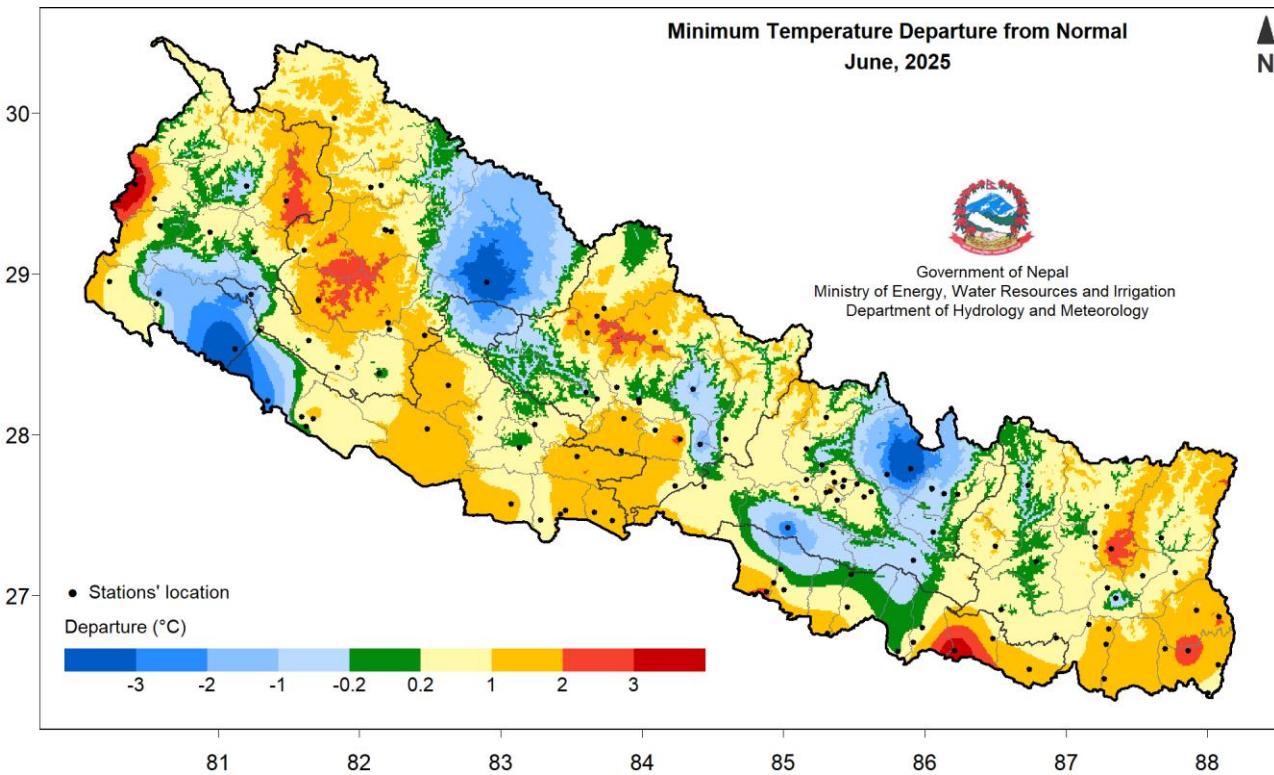

Figure 11: Departure from normal minimum temperature in June 2025.

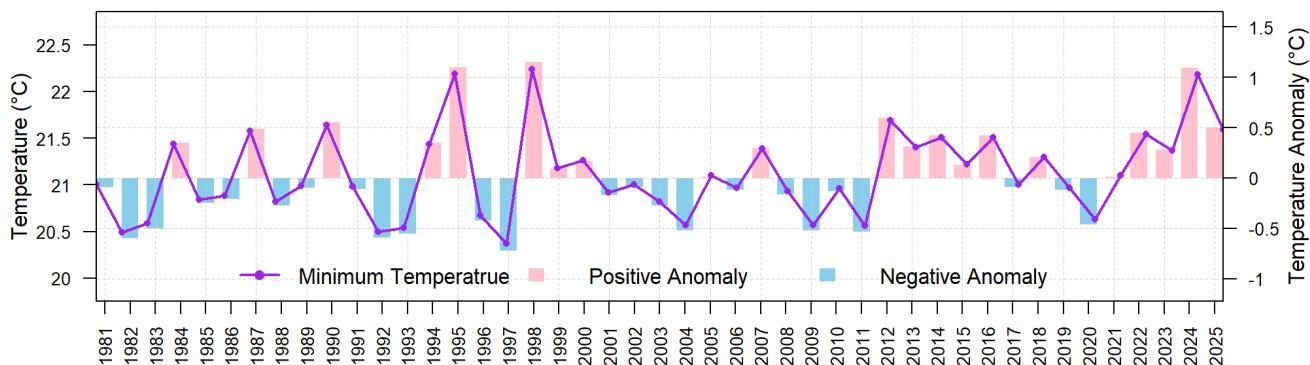

Figure 12: All Nepal monthly average minimum temperature of June from 1981 to 2025 (average of 63 stations)

## Drought

Severe drought condition was observed over isolated part of Koshi Province and Madhesh Province. Moderate drought condition was observed over few parts of Karnali Province, Gandaki Province, Madhesh Province and Koshi Province (Figure 3). Drought has been categorized based on the observed precipitation compared to normal. A drought is defined as moderate, severe and extreme as given in the table below.

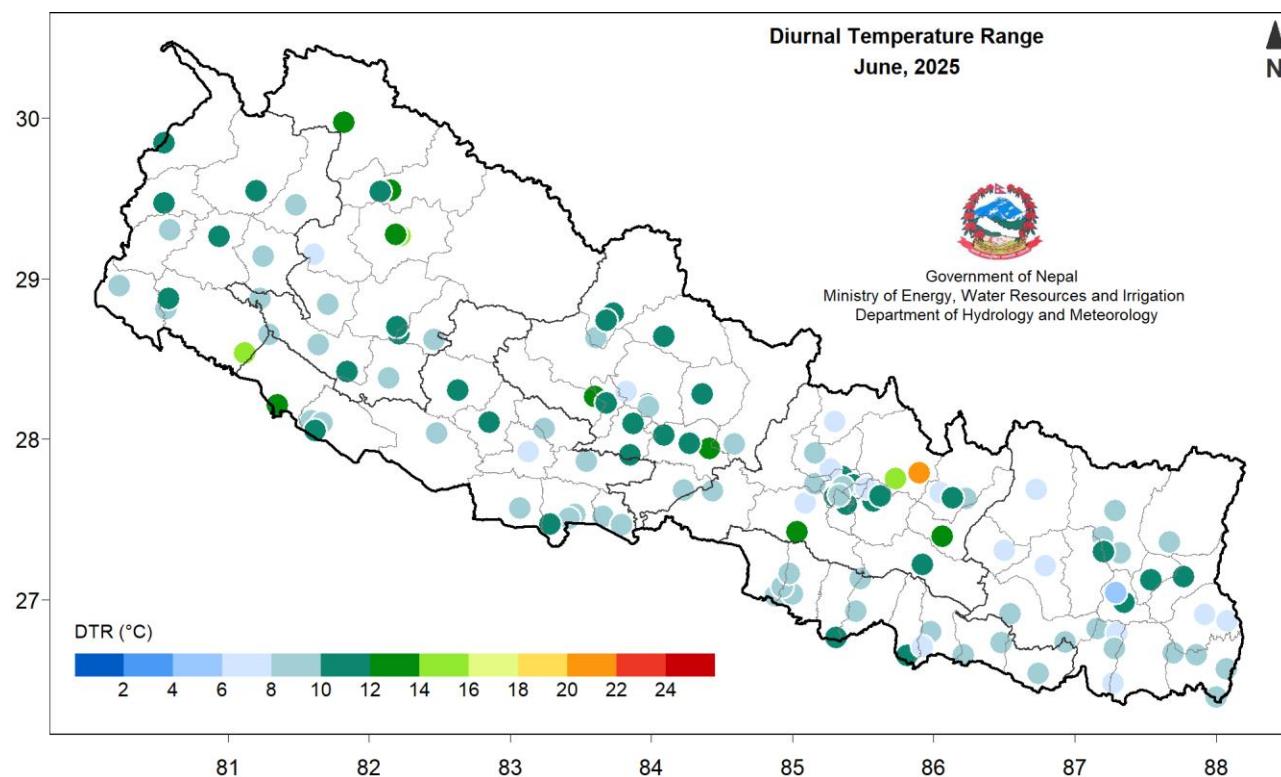

**Government of Nepal  
Ministry of Energy, Water Resource and Irrigation  
Department of Hydrology and Meteorology  
Climate Division (Climate Analysis Section)  
Babarmahal, Kathmandu**

**Table 1: Drought category**

S.N.	Percentage of normal precipitation (%)	Drought category
1	50 - 75	Moderate drought
2	30 - 50	Severe drought
3	< 30	Extreme drought

**Diurnal Temperature Range**

Most parts of the country recorded a moderate diurnal temperature range (DTR) below 10°C. However, some stations in the Bagamati Province, Karnali Province and Sudurpaschim Province experienced higher DTRs above 16°C. DTR is the range between maximum and minimum temperature during a day.

**Note:**

- This summary is prepared based on the precipitation and temperature recorded at 126 meteorological stations.
- Normal precipitation/temperature is the average of the monthly precipitation/temperature for the period of 1991-2020. An asterisk (\*) indicates locations where normal data are unavailable; in such cases, the values are average over the available data period. In case of precipitation, less than 90% of normal precipitation is considered as below normal, 90 to 110% is considered as near normal, and more than 110% of normal precipitation is considered as above normal precipitation for the month.
- Abbreviation: "No." = number; "hr" = hour; "mm" = millimeter; "temp" = temperature; "-" = Data Not Available; "NR" = No Precipitation; "dep." = departure; "Tx" = Maximum temperature; "DTR" = Diurnal Temperature Range
